Experience

- **Software Developer (Full-Stack Development)** *June 2023 - Present*

Instituto Tecnológico de Las Américas, ITLA

  - Contributed to the progressive migration of the ORBI academic system from PHP to Angular, developing modules for academic and administrative platforms using Angular (TypeScript), REST APIs, and SQL Server.
  - Restructured and optimized the faculty management system, improving performance, maintainability, and user experience by redesigning the frontend following Angular best practices and implementing new features such as digital attendance tracking.
  - Developed key modules for the Registration administrative system, including course group planning and the complete Grade Review Request workflow, incorporating status management, validations, and process control.
  - Developed an API endpoint for generating grade review reports in PDF format, helping digitize the process, reduce paper usage, and improve document organization.
  - Improved the user experience (UX/UI) across multiple modules by applying best practices in navigation, accessibility, and visual structure.

- **Junior Developer** *January 2021 - March 2021*

XpertCode

  - Completed a hands-on JavaScript training program, developing exercises focused on programming logic, DOM manipulation, and software development best practices.
  - Managed and updated WordPress websites, including content customization and structural modifications.
  - Strengthened fundamental skills in web development, version control, and problem-solving.

Personal Projects

- **SimuVerse LAB**

Developed an educational platform featuring a web-based management system and virtual reality simulations for practical learning.

  - Enables efficient storage and management of information for consultation and progress tracking.
  - Technologies used: ASP.NET Core API, Angular, Tailwind CSS, and SQL Server.

- **EquilibrApp**

Developed a personal finance web application for managing income, expenses, and accounts across different periods with clear financial rep

  - Allows users to efficiently organize categories, budgets, and account balances.
  - Technologies used: ASP.NET Core API, Angular, Tailwind CSS, and SQL Server.

- **Dual Balance**

Developed an endless runner video game in Unity centered around controlling light and darkness through a dual-energy system.

  - Features attack mechanics, energy management, and dynamic generation of obstacles and energy orbs.
  - Technologies used: Unity, C#, mobile UI/UX, and game mechanics design.

Education

- **Technologist in Software Development** *2019-21*

Instituto Tecnológico de Las Américas, ITLA

- **Computer Technologies Engineering** *2022-25*

Universidad Iberoamericana, UNIBE

- **Technologist in Interactive Simulations and Video Games** *2024-26*

Instituto Tecnológico de Las Américas, ITLA

Relevant Courses

- **Scrum Certification Course** Udemy *2024*

Technical Skills, Languages and Soft Skills

Languages: Spanish (Native), English (Intermediate)
Programming Languages: C#, JavaScript, TypeScript, HTML + CSS
Web Development Tools: VS Code, Git, GitHub
Frameworks and Libraries: ASP.NET Core, ASP.NET, Angular, React
Databases: SQL Server
Soft Skills: Problem-Solving, Self-Learning, Presentation, Adaptability, Teamwork
